LOCATION

Atlanta, GA

CORE TECHNICAL SKILLS

- **Languages:** Java (11→21), Python, TypeScript, JavaScript (ES6+), Go
- **Frameworks:** Spring Boot (2.7→3.x), FastAPI, React 18, Node.js, RESTful APIs, GraphQL
- **Cloud:** AWS (ECS, RDS, S3, Lambda, CloudFront), Terraform IaC, Docker, Kubernetes, GitHub Actions
- **Databases:** PostgreSQL, MySQL, DynamoDB, Redis, Elasticsearch; schema design, query optimization
- **Testing:** JUnit 5, Mockito, Pytest, Jest, Playwright; 85%+ coverage maintained; TDD; contract testing

EDUCATION

Bachelor of Science in Computer Science

State University of Nowhere | May 2018

GPA: 3.7/4.0 | Cum Laude

LEADERSHIP & AWARDS

Engineering Excellence Award, Fictitious Financial Corp — Q3 2024

Hackathon Winner (AI Tooling Track) — FinTech Innovation Summit 2023

Led internal "AI Dev Days" workshop series; 80+ engineers trained across 2 events

Software engineer with 6 years building production systems across fintech and e-commerce. Led zero-downtime migration of monolithic Java platform to containerized microservices on AWS; maintained 99.5% SLA throughout. Drives AI-assisted development adoption, achieving 40%+ tooling uptake across 3 engineering teams. Owns full delivery lifecycle from architecture to production monitoring.

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Mar 2023 – Present

Fictitious Financial Corp, New York, NY

- Led architecture and delivery of real-time payment processing service handling 2M+ transactions/day with sub-50ms p99 latency
- Drove AWS ECS migration from bare-metal; reduced infrastructure costs 35% through right-sizing and reserved capacity
- Championed GitHub Copilot rollout across 3 teams; 40%+ adoption within 60 days; measurable reduction in review cycle time
- Designed event-driven order-state machine using Kafka; eliminated 12 manual reconciliation jobs consuming 8+ engineering-hours/week
- Mentored 4 junior engineers; conducted weekly design reviews and established team coding standards

Software Engineer

Jun 2020 – Feb 2023

Placeholder E-Commerce Inc., Austin, TX

- Built product catalog microservice in Spring Boot serving 15M SKUs; optimized Elasticsearch indexing reducing search latency 60%
- Delivered React 18 storefront redesign increasing checkout conversion 8% in A/B test across 2M monthly users
- Implemented OAuth2/JWT authentication layer replacing legacy session model; zero security incidents post-migration
- Automated CI/CD pipeline with GitHub Actions; deployment frequency improved from weekly to multiple per day
- Maintained 85%+ test coverage across all owned services using JUnit, Mockito, and Jest

Junior Software Engineer

Aug 2018 – May 2020

Sample Startup LLC, Remote

- Developed REST APIs for SaaS analytics dashboard used by 300+ enterprise clients
- Contributed frontend React components and wrote integration tests reducing QA cycle by 2 days per sprint
- Participated in on-call rotation; MTTR reduced 40% through improved runbooks and alerting thresholds

PERSONAL PROJECTS

FakeContextMCP | Python, FastAPI, LangGraph | 2024

- Open-source MCP server giving AI assistants persistent structured memory of a job search
- 50+ typed tools: resume generation, RAG semantic search, cover letter export, tone profile ingestion
- FAISS vector index over 1,200+ document chunks; PDF rendering via WeasyPrint

SynthCam | Python, React Native, Azure | 2024

- IoT camera system: FastAPI backend (MJPEG streaming, OpenCV motion detection) connected to React Native iOS app
- Azure Blob Storage for clip/snapshot archiving; Tailscale VPN for secure remote access; shipped to TestFlight
